

PE Opportunities

PE-OPP · Private Markets · Classification: In Development · Window: 2016–2026 (modeled)

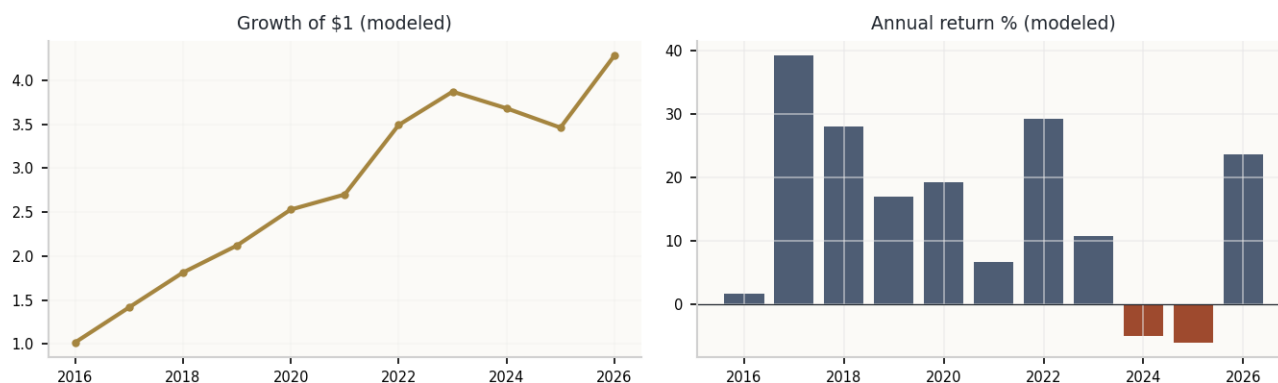

Strategy overview

Opportunistic private equity mandate with dedicated investment materials.

In development; modeled illustration only.

Performance statistics (modeled annual returns)

CAGR	Volatility (σ)	Sharpe (rf 3.63%)	Best year	Worst year	Final value of \$1
14.14%	14.68%	0.77	39.2% (2017)	-6.0% (2025)	\$4.28

Methodology

Annual returns 2016–2026 are a modeled illustration constructed under the RALO publication-control conventions. $CAGR = (\Pi(1+r_i))^{1/n} - 1$; Sharpe = (mean annual return – 3.63% risk-free proxy) ÷ σ of annual returns. Where the public page publishes anchor statistics, the model is calibrated toward those anchors; figures remain modeled/synthetic statistics, not realized performance. Past performance is not indicative of future results.
